## ICESAFE NAC CRYSTAL DE-ICER

This new formulation has been developed by the company's technical team, who have more 15 years experience in the de-icer market. Icesafe NAC crystal solid de-icer is a specially developed formulation based on sodium acetate, the environmentally preferred product. It is non corrosive to most metals and so offers great advantages over more traditional de-icers such as rock salt.

Icesafe NAC crystal is available in 1000kg FIBC's, 25kg and 10kg bags to meet the demands of all sizes of customers from large airports to small car parks. The environmental benefits and superior performance of a sodium acetate based solid de-icer mean that it can be used in many different areas where high performance de-icing is required. As it is white and does not contain any insoluble residues it can be used in sensitive areas without the issues of staining of surfaces such as carpets, walkways etc

Icesafe NAC will work at temperatures down to -17°C and below whereas salt, urea and other cheaper de-icers will only be effective just around 0°C. Over recent winters we have seen temperatures being below -10°C for many days on end and so a significant number of companies have seen the benefit of using a high performance de-icer for their general de-icing needs. If used before snow and ice are present it can prevent any build up and keep your business moving during winter weather.

The product is not classified as hazardous to health or to the environment. It is not classified as hazardous for transport by any mode

 icesafe NAC Crystals

### PRODUCT SPECIFICATION

APPEARANCE: white, coarse granular solid  
SODIUM ACETATE: Minimum 95% (as trihydrate)  
PERFORMANCE ADDITIVES: Minimum 4%

### SUGGESTED APPLICATION RATES

Temp 0°C 15-25g/M<sup>2</sup>  
(thin ice present)  
Temp -10°C 50-75g/M<sup>2</sup>  
(2-3cm ice present)
